## SUPPLEMENTS TO THE MONTHLY WEATHER REVIEW.

During the summer of 1913 the issue of the system of publications of the Department of Agriculture was changed and simplified so as to eliminate numerous independent series of Bureau bulletins. In accordance with this plan among other changes, the series of quarto bulletins—lettered from A to Z—and the octavo bulletins—numbered from 1 to 44—formerly issued by the U. S. Weather Bureau have come to their close.

Contributions to meteorology such as would have formed bulletins are authorized to appear hereafter as Supplements of the MONTHLY WEATHER REVIEW. (Memorandum from the Office of the Assistant Secretary, May 18, 1914.)

These Supplements comprise those more voluminous studies which appear to form permanent contributions to the science of meteorology and of weather forecasting, as well as important communications relating to the other activities of the U. S. Weather Bureau. They appear at irregular intervals as occasion may demand, and contain approximately 100 pages of text, charts, and other illustrations. Subscribers to the MONTHLY WEATHER REVIEW receive the SUPPLEMENTS without extra charge. Copies may be procured at the prices indicated below by addressing the Superintendent of Documents, Government Printing Office, Washington, D. C.

### SUPPLEMENTS PUBLISHED.

- No. 1. Types of storms of the United States and their average movements. By E. H. Bowie and R. H. Weightman, Washington, 1914. 37 p. 114 ch. 4°. Price 25 cents. (W. B. No. 538.)
- No. 2. I. Calendar of the leafing, etc., of the common trees of the eastern United States. By G. N. Lamb. 19 p. 4 figs. II. Phenological dates, etc., recorded by T. Mikesell at Wauseon, Ohio. By J. Warren Smith. 73 p. 2 figs. Washington, 1915. 4°. Price 25 cents. (W. B. No. 558.)
- No. 3. (*Aerology No. 1.*) Sounding balloon ascensions at Fort Omaha, Nebr., May 8, 1915, etc. By W. R. Blair and others. 67 p. 23 figs. Washington, 1916. 4°. Price 25 cents. (W. B. No. 592.)
- No. 4. Types of anticyclones of the United States and their average movements. By E. H. Bowie and R. H. Weightman. Washington, 1917. 25 p. 7 figs. 73 ch. 4°. Price 25 cents. (W. B. No. 600.)
- No. 5. (*Aerology No. 2.*) Free-air data at Drexel Aerological Station: January, February, and March, 1916. By W. R. Blair and others. Washington, 1917. 59 p. 6 figs. 4°. Price 25 cents. (W. B. No. 603.)
- No. 6. Relative humidities and vapor pressures over the United States, including a discussion of data from recording hair hygrometers for a period of about 5 years. By P. C. Day. Washington, 1917. 61 p. 7 figs. 34 charts. 4°. Price 25 cents. (W. B. No. 609.)
- No. 7. (*Aerology No. 3.*) Free-air data at Drexel Aerological Station: April, May, and June, 1916. By W. R. Blair and others. Washington, 1917. 51 p. 4 figs. 4°. Price 25 cents. (W. B. No. 619.)
- No. 8. (*Aerology No. 4.*) Free-air data at Drexel Aerological Station: July, August, September, October, November, and December, 1916. By W. R. Gregg and others. Washington, 1918. 111 p. 12 figs. 4°. Price 25 cents. (W. B. No. 642.)
- No. 9. Periodical events and Natural Law as guides to agricultural research and practice. By A. D. Hopkins. Washington, 1918. 42 p. 22 figs. 4°. Price 25 cents. (W. B. No. 643.)
- No. 10. (*Aerology No. 5.*) Free-air data at Drexel Aerological Station: January, February, March, April, May, and June, 1917. By W. R. Gregg and others. Washington, 1918. 101 p. 11 figs. 4°. Price 25 cents. (W. B. No. 651.)
- No. 11. (*Aerology No. 6.*) Free-air data at Drexel Aerological Station: July, August, September, October, November, and December, 1917. By W. R. Gregg and others. Washington, 1918. 108 p. 11 figs. 4°. Price 25 cents. (W. B. No. 658.)
- No. 12. (*Aerology No. 7.*) Free-air data at Drexel and Ellendale Aerological Stations: January, February, and March, 1918. By W. R. Gregg and others; Cold winter of 1917-18. By W. R. Gregg. Description of the Ellendale Aerological Station. By V. E. Jakl. Washington, 1918. 82 p. 10 figs. 4°. Price 25 cents. (W. B. No. 660.)
- No. 13. (*Aerology No. 8.*) I. Free-air data at Drexel and Ellendale Aerological Stations: April, May, and June, 1918. By W. R. Gregg and others. II. Notes on kite flying. By V. E. Jakl. Washington, 1918. 81 p. 1 fig. 4°. Price 25 cents. (W. B. No. 663.)
- No. 14. (*Aerology No. 9.*) I. Free-air data at Broken Arrow, Drexel, Ellendale and Royal Center Aerological Stations, July, August, and September, 1918. By W. R. Gregg and others. II. Broken Arrow Aerological Station. By John A. Reihle. III. Royal Center Aerological Station. By Homer W. Ball, Washington, 1919. 132 p. 22 figs. 4°. Price, 25 cents. (W. B. No. 672.)

**FREE-AIR DATA AT BROKEN ARROW, OKLA., DREXEL, NEBR., ELLENDALE, N. DAK., AND ROYAL CENTER, IND., AEROLOGICAL STATIONS, JULY TO SEPTEMBER, 1918, INCLUSIVE.**

By the AEROLOGICAL DIVISION, WILLIS RAY GREGG, Meteorologist, In Charge.

**GENERAL STATEMENT.**

During the three months July to September, 1918, inclusive, kite flights were made on all but 6 days at Drexel and on all but 5 days at Ellendale, failures on these days being due to light winds. Free-air observations were begun during this period at Broken Arrow, Okla., and Royal Center, Ind.<sup>1</sup> The records obtained at Broken Arrow were to low altitudes only, owing to delay in the receipt of suitable power equipment. The number of flights and their mean altitudes at the four stations are given in Table 1.

TABLE 1.—Distribution and mean altitudes of kite flights at Broken Arrow, Okla., Drexel, Nebr., Ellendale, N. Dak., and Royal Center, Ind., during the period July to September, 1918.

	July.	August.	September.	Total.	July.	August.	September.	Total.
	Broken Arrow.				Drexel.			
Number of flights.....		8	10	18	38	47	42	127
Mean altitude, meters.....		1,139	1,321	1,240	2,858	2,799	3,104	2,917
	Ellendale.				Royal Center.			
Number of flights.....	38	45	44	127	15	32	24	71
Mean altitude, meters.....	2,129	2,824	2,687	2,569	1,965	2,457	3,087	2,566

**SPECIAL NOTES ON KITE FLIGHTS.**

*Broken Arrow, Okla., September 19.*—"During the flight on this date the sky was overcast with stratus clouds at an altitude of about 400 meters above the surface. Thunder was heard at intervals and at 9:56 a. m. with 3 kites and 1,800 meters of wire out lightning struck the head kite and completely destroyed the wire from this kite to the reel house, leaving along the path of the discharge a streak of thick, yellowish brown smoke; this smoke appeared to move first in the direction of the reel house and then in the reverse direction. A sharp shower of large raindrops began about two minutes after the discharge, lasting but a short time.

<sup>1</sup> For descriptions of these stations see p. 8 and p. 10, respectively, this Supplement.

"The lightning flash was accompanied by a sound more resembling an explosion than ordinary thunder. The reel house was filled with smoke and a peculiar odor was noticeable. Two men were reeling in the kites by hand at the time and were temporarily blinded and deafened, but suffered no permanent injury. The wire on the reel was not damaged, but the copper wire connecting the reel with the earth was burned off. One of the galvanized iron wires by means of which secondary kites are attached to the main wire was later found to be fused at both ends; the steel 'piano' wire was still wound around this heavy wire but was burned through at the loop.

"On September 23d, the head kite was found about 5 kilometers southwest of the station. Its brace wires were nearly all destroyed, and there were several small holes burned in the sails where pieces of hot wire had dropped on them. The meteorograph was not injured, although the case was covered with soot."  
J. A. R.

For descriptions of similar occurrences, see Bulletin of the Mount Weather Observatory, volume 6, page 247; MONTHLY WEATHER REVIEW SUPPLEMENT No. 10, page 5, 6; SUPPLEMENT No. 11, page 5; and SUPPLEMENT No. 13, page 5.

*Free-Air Temperatures.*

Table 2 contains mean monthly temperatures at different levels, as observed at Drexel, Ellendale and Royal Center during the period July to September, 1918, inclusive. Means for July at Royal Center are based on records from the 12th to the end of the month only. Means for September at this station are not given, as the temperature element of the meteorograph used was later found to be defective. The records for Broken Arrow were too few in number to enable mean values to be computed. For purposes of comparison, three-year means for Drexel and five-year means for Mount Weather, Va., are also presented in this table. Temperatures at Drexel were generally above normal in August, below in September and very close to normal in July.

TABLE 2.—Mean monthly temperatures at Drexel, Ellendale, and Royal Center; also 5-year means at Drexel and 5-year means at Mount Weather, Va.

Altitude, sea level (meters).	JULY.					AUGUST.					SEPTEMBER.

## Diurnal Series Observations.

During the three months six series of observations of diurnal variations were made at Drexel; four at Ellendale; and three at Royal Center. The number of observations and the average altitudes reached in each series are shown in Table 3.

TABLE 3.—Number of observations and average altitudes reached in diurnal series at Drexel, Nebr., Ellendale, N. Dak., and Royal Center, Ind., July to September, 1918, inclusive.

Station.	Dates.	Number of flights.	Mean altitude.
Drexel.....	July 1-2.....	8	3,545
	July 31-Aug. 1.....	6	2,141
	Aug. 5-6.....	9	3,139
	Aug. 21-22.....	9	2,832
	Sept. 11-12.....	6	3,382
	Sept. 23-24.....	9	3,203
Ellendale.....	July 30-31.....	8	1,909
	Aug. 9-10.....	8	3,116
	Aug. 22-23.....	7	3,780
	Sept. 24-25.....	8	3,562
Royal Center.....	Aug. 7-8.....	6	3,604
	Aug. 22-23.....	6	2,580
	Sept. 12-13.....	5	3,852

As already stated, the temperature element in the meteorograph used at Royal Center became defective about the 1st of September, and no isothermal chart can, therefore, be made for the last series at that station. The duration of all other series and the temperatures observed in each are shown in figures 1 to 12. Weather conditions, except pressure distribution, and all other observed data may be found in Tables 5 to 15.

## Pressures and winds during the series flights.

## Drexel, Nebr.

July 1-2.—Relatively high pressure (1,022 mb.), central over Kansas, Missouri, Oklahoma and Arkansas on the morning of the first, moved eastward during the series to the middle Atlantic Coast States and diminished somewhat in energy (1,019 mb.). In the meantime a well-developed LOW (994 mb.) passed from the upper Lake region northeastward and a moderate LOW (998 mb.) appeared over the region just north of Montana. Surface winds veered from southerly to west-southwesterly with the eastward movement of the HIGH. Winds at higher levels were northwesterly under the influence of the northeastern LOW, this influence being apparent at the greatest altitudes reached, about 4,300 meters. Later, with the approach of the northwestern LOW, the upper winds backed to westerly.

July 31-August 1.—During this series barometric gradients were weak over the entire country. Relatively high pressure (about 1,019 mb.) covered the Lake region and Ohio Valley and low pressure (about 1,005 mb.) was central north of Montana and the Dakotas. Surface winds were southerly to southwesterly; those aloft, southwesterly to westerly. The upper winds were too light to sustain the kites from 11:00 p. m. of July 31 to 7 a. m. of August 1, and throughout the series comparatively low altitudes could be reached.

August 5-6.—A trough of relatively low pressure (about 1,005 mb.) extended from the upper Lake region

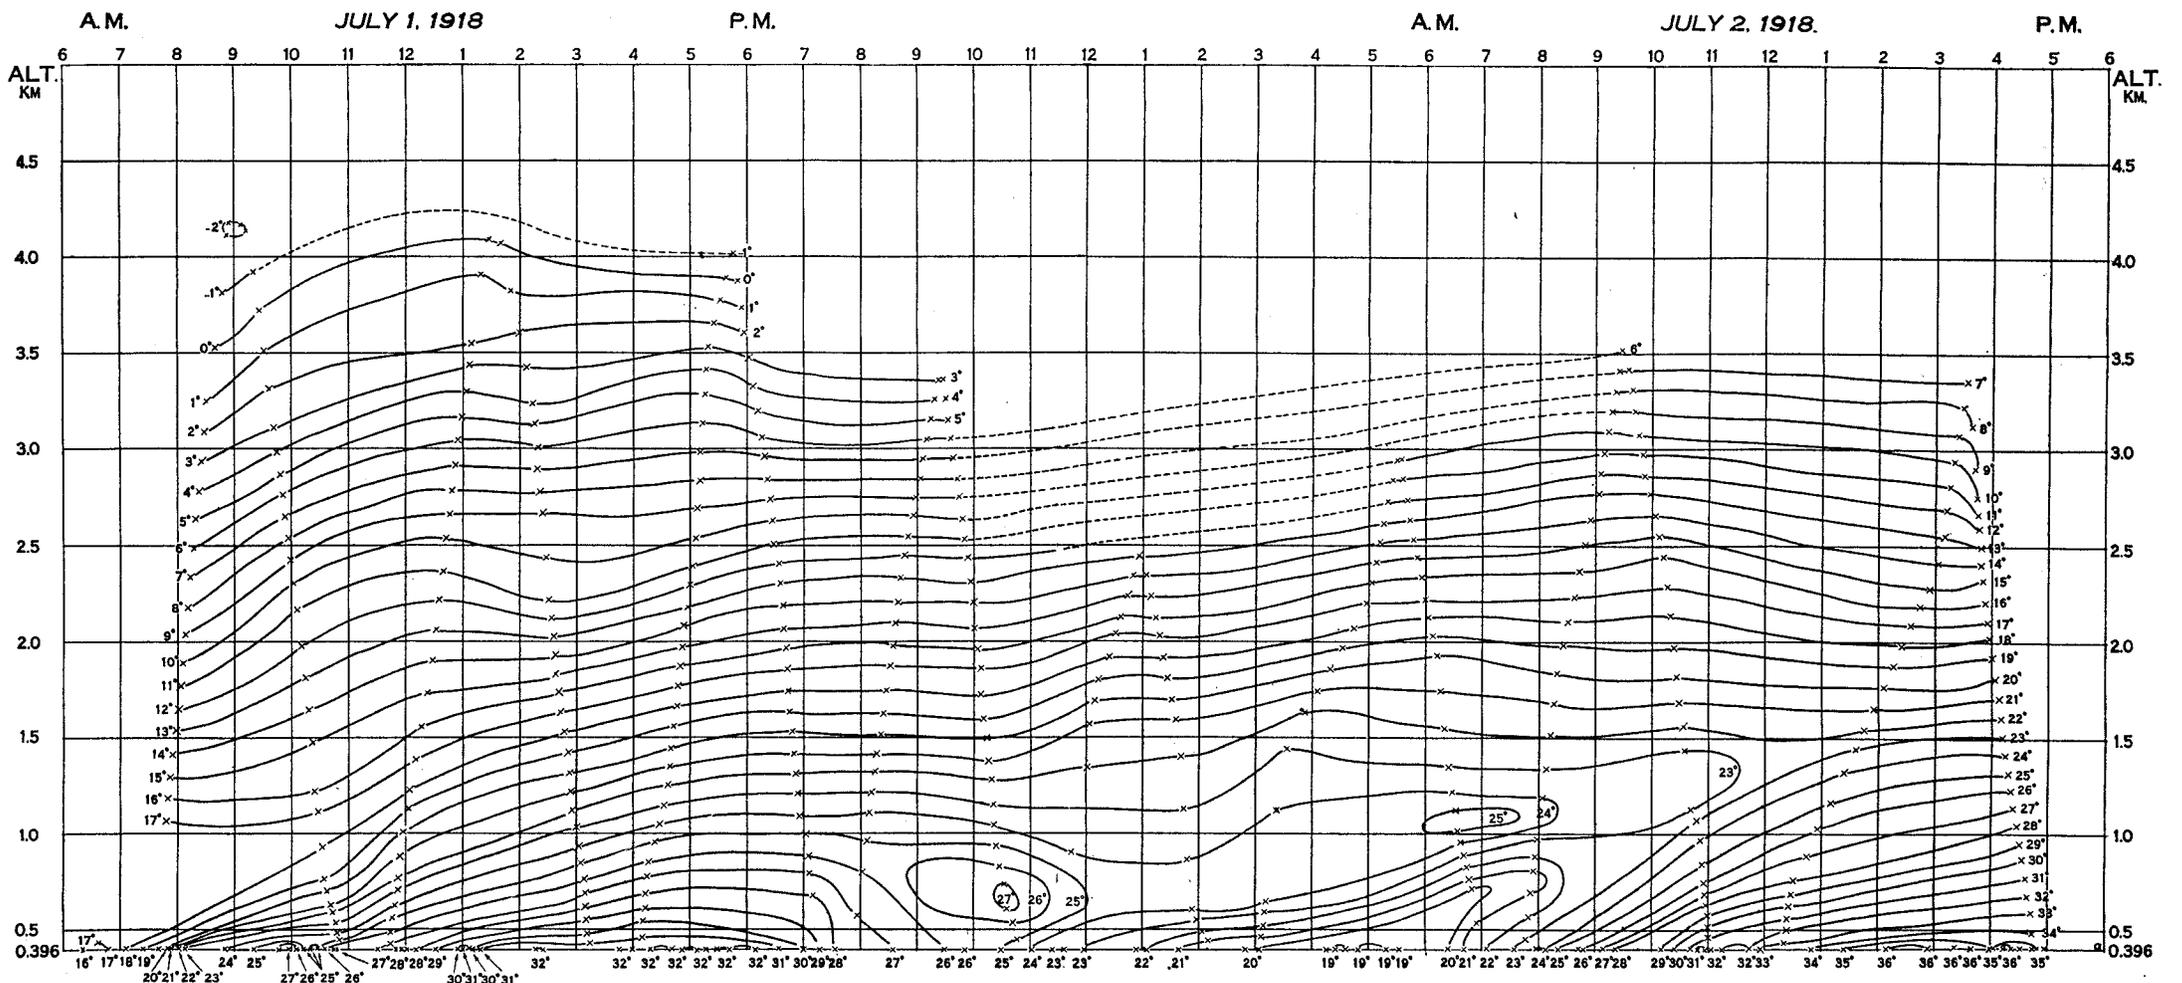

FIG. 1. Free-air temperatures, °C., above Drexel Aerological Station; observed July 1-2, 1918.

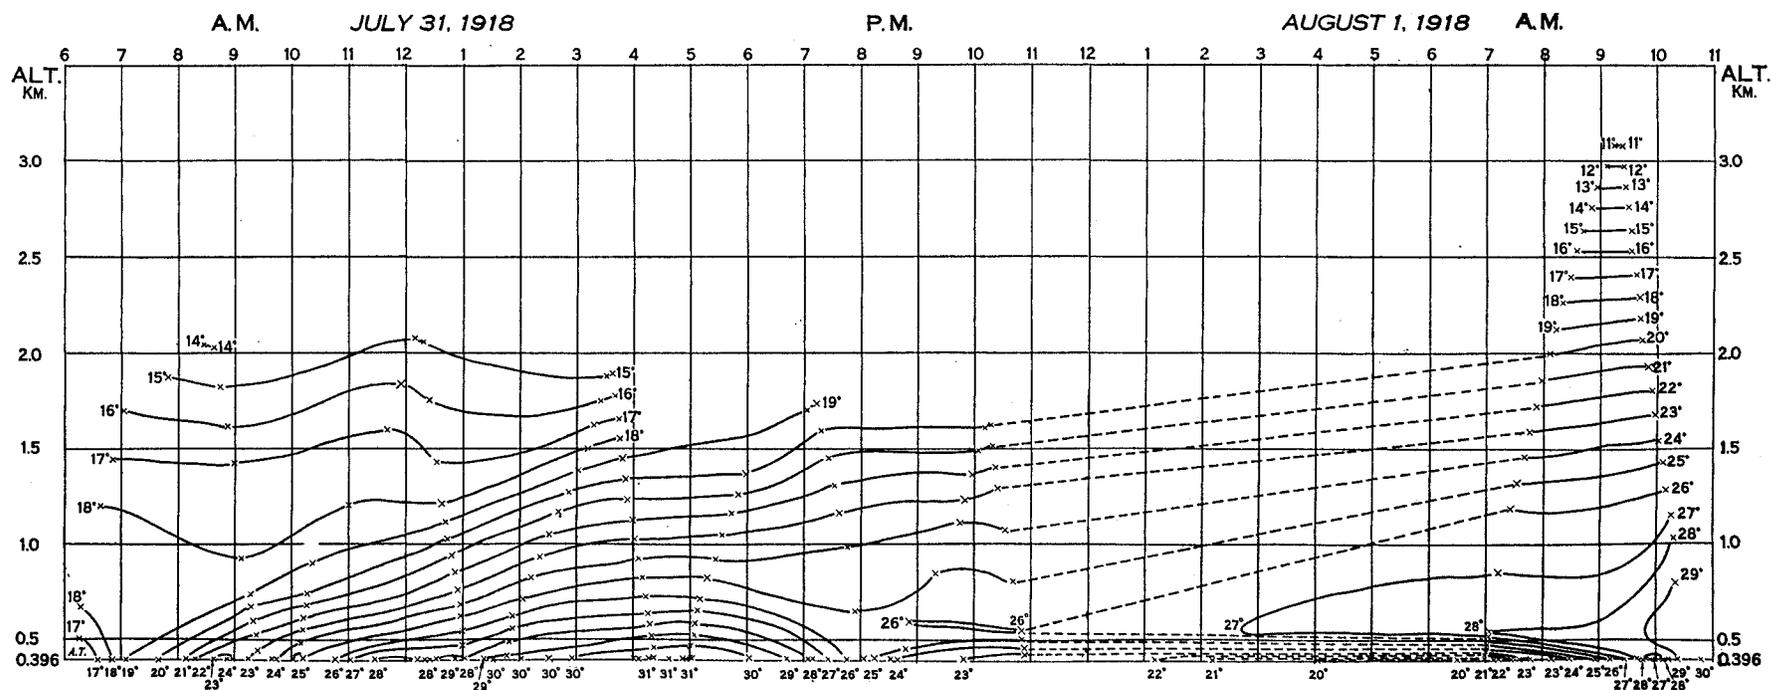

FIG. 2. Free-air temperatures, °C., above Drexel Aerological Station; observed July 31-August 1, 1918.

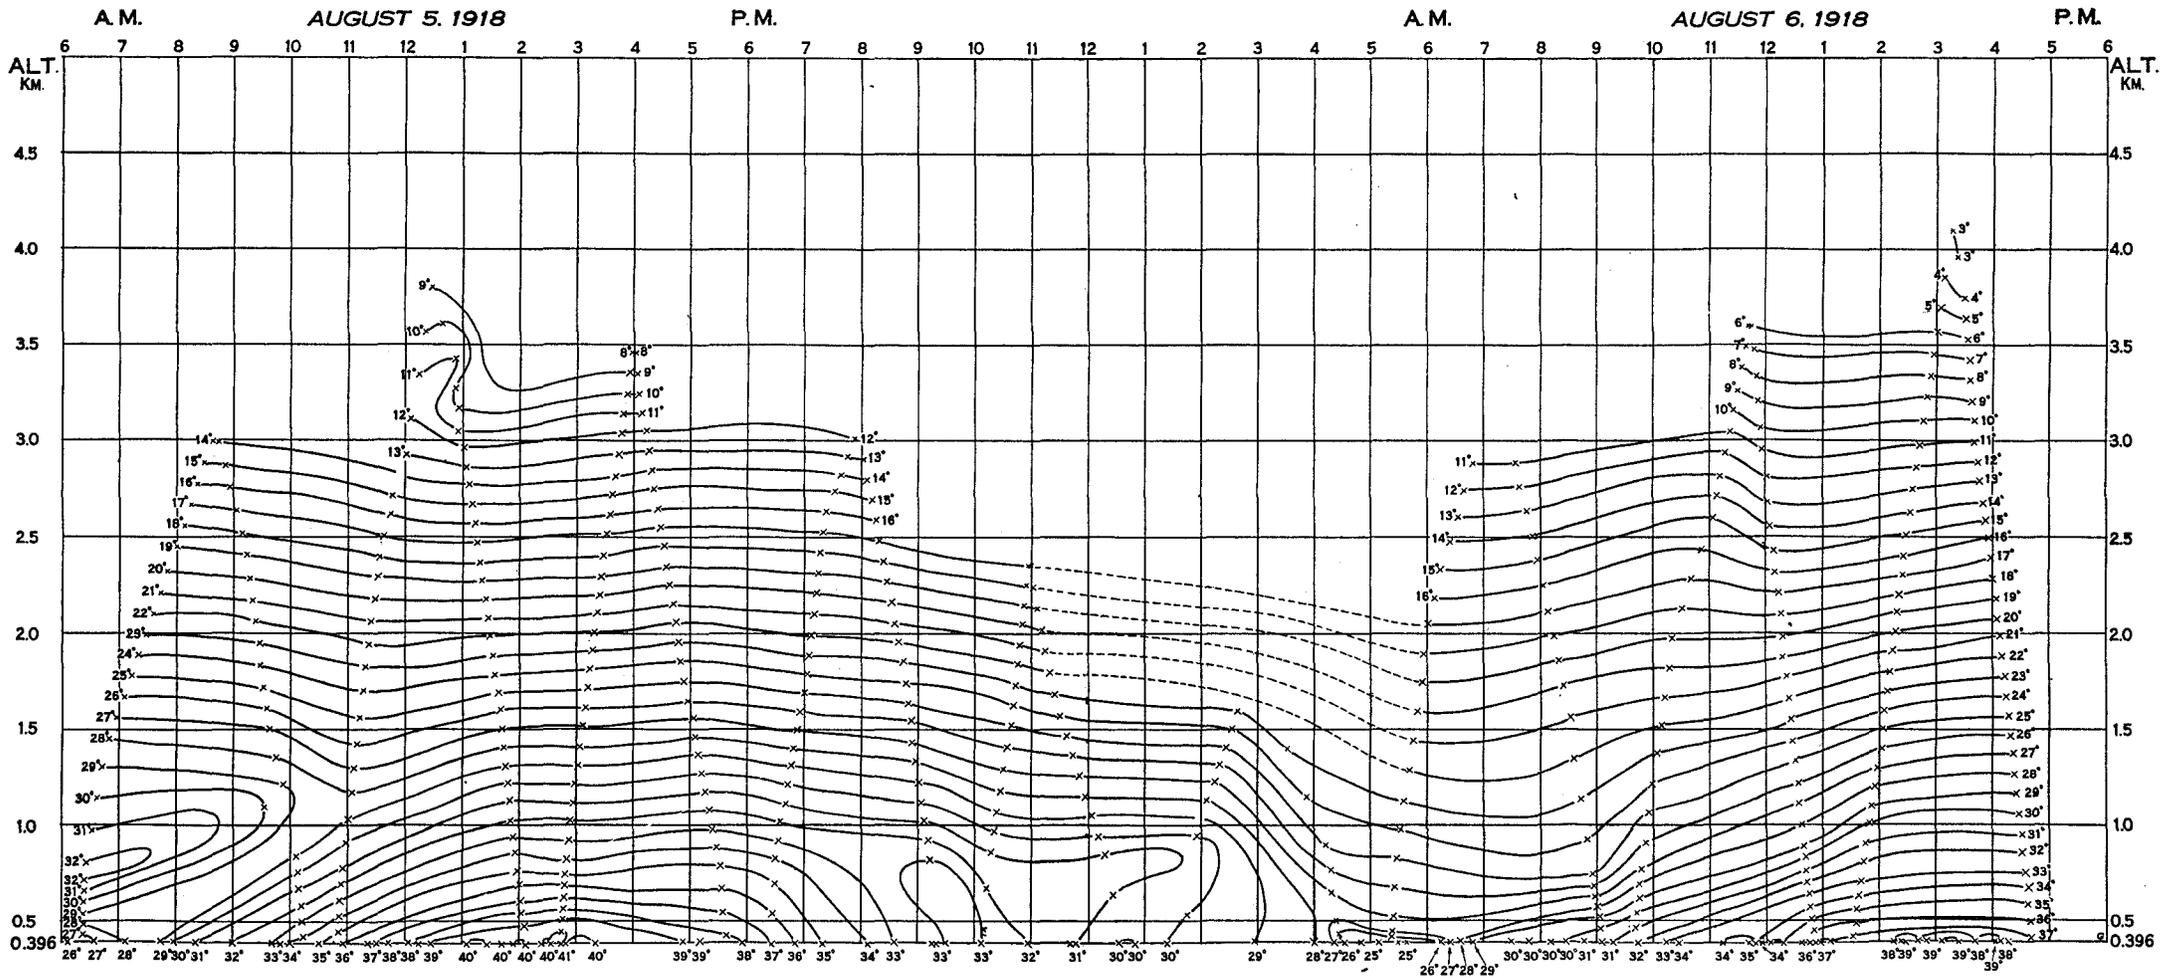

FIG. 3. Free-air temperatures, °C., above Drexel Aerological Station; observed August 5-6, 1918.

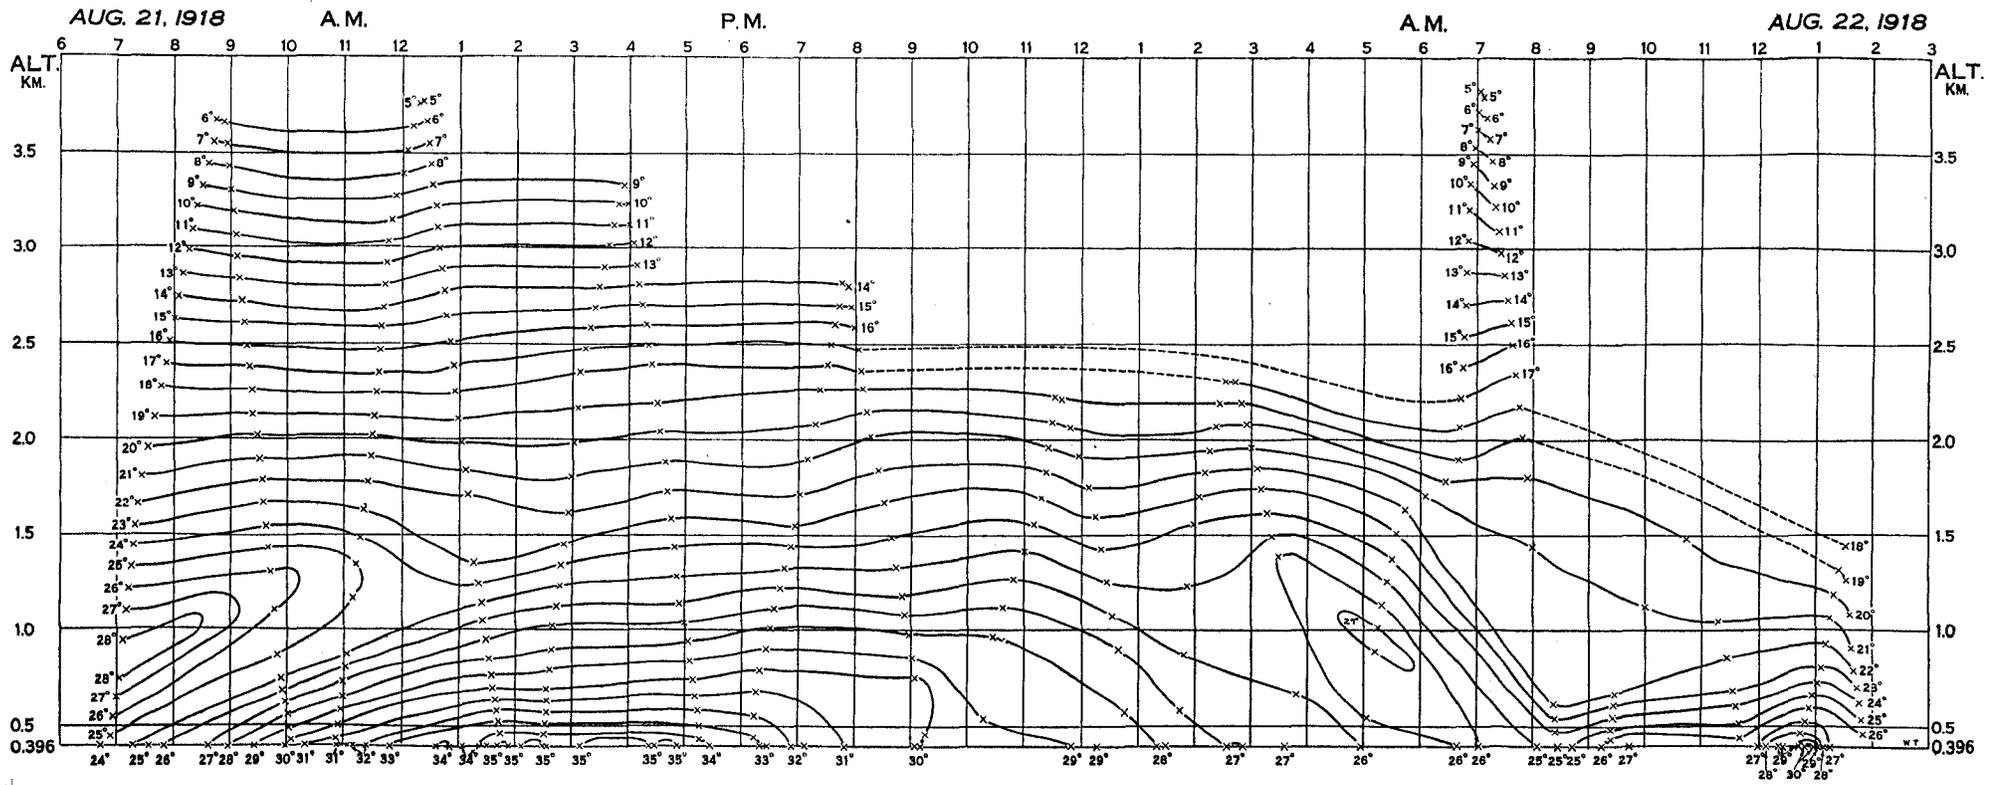

FIG. 4. Free-air temperatures, °C., above Drexel Aerological Station; observed August 21-22, 1918.

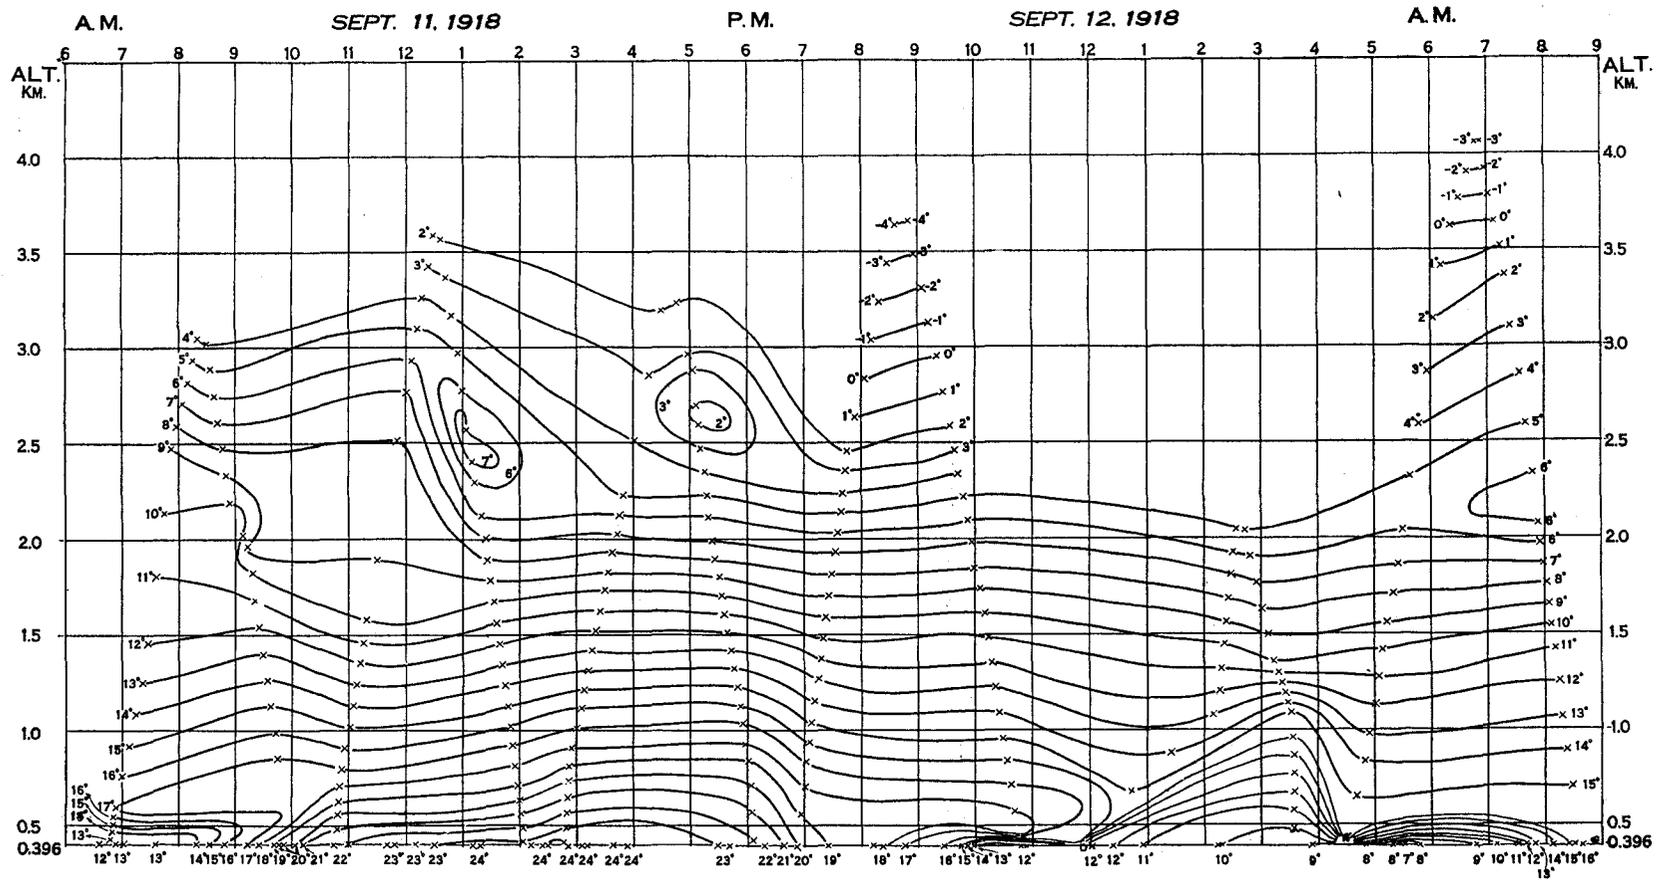

FIG. 5. Free-air temperatures, °C., above Drexel Aerological Station; observed September 11-12, 1918.

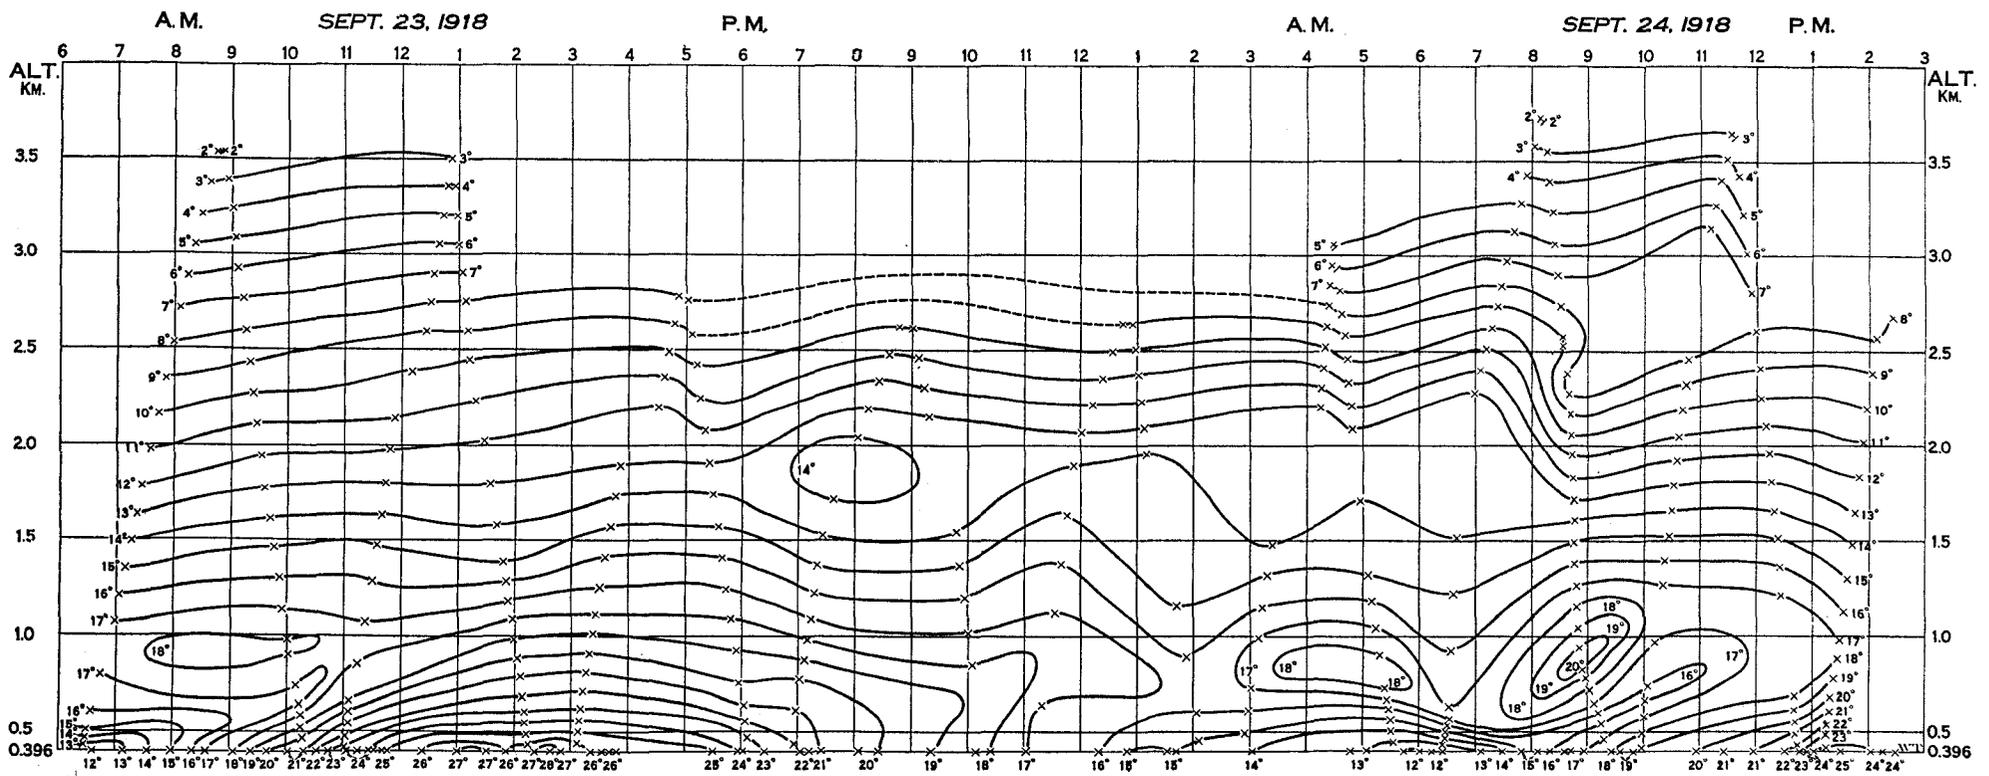

FIG. 6. Free-air temperatures, °C., above Drexel Aerological Station; observed September 23-24, 1918.

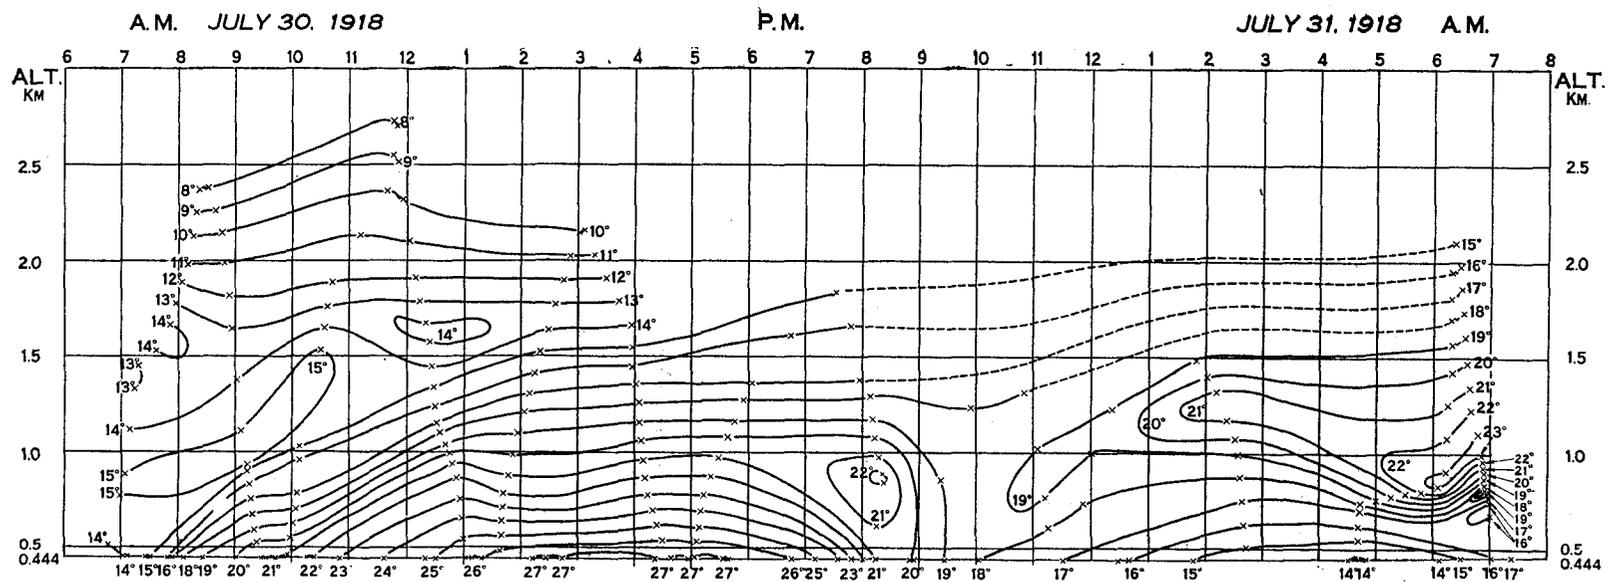

FIG. 7. Free-air temperatures, °C., above Ellendale Aerological Station; observed July 30-31, 1918.

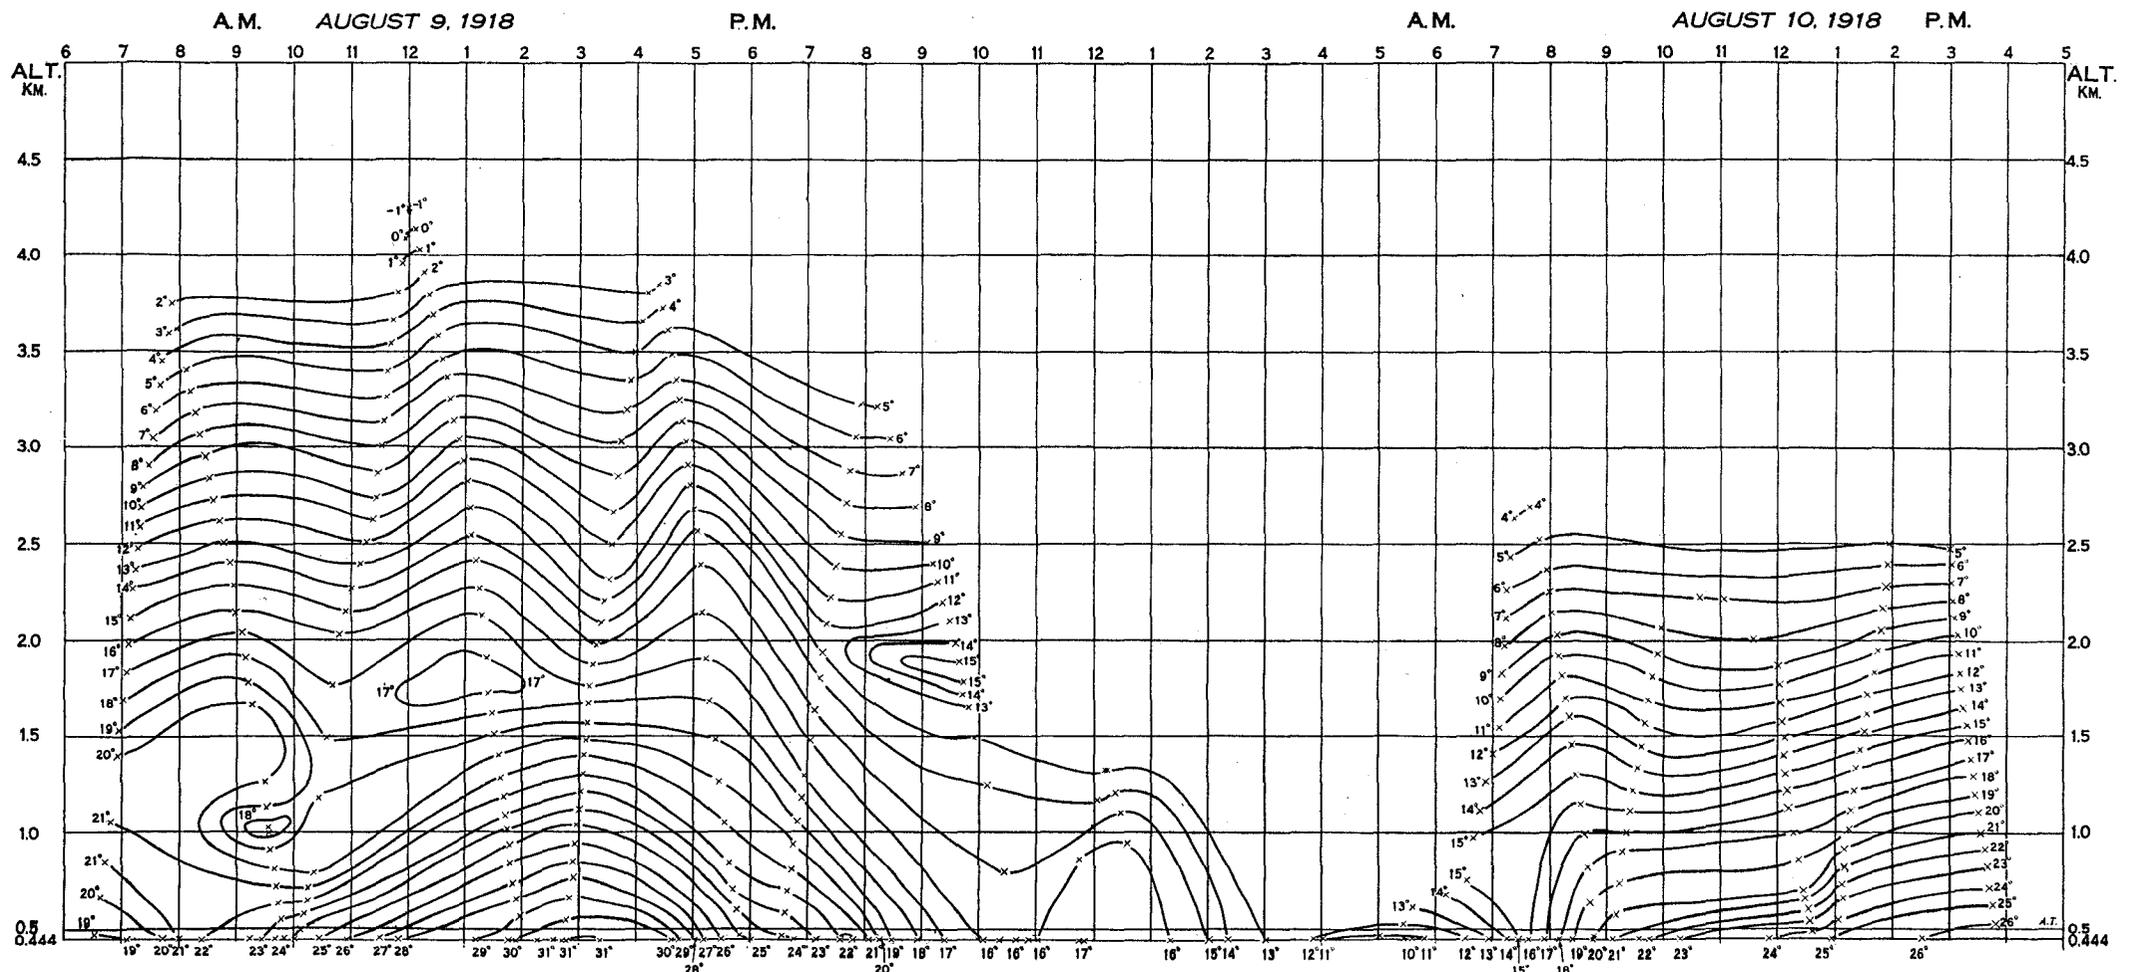

FIG. 8. Free-air temperatures, °C., above Ellendale Aerological Station; observed August 9-10, 1918.

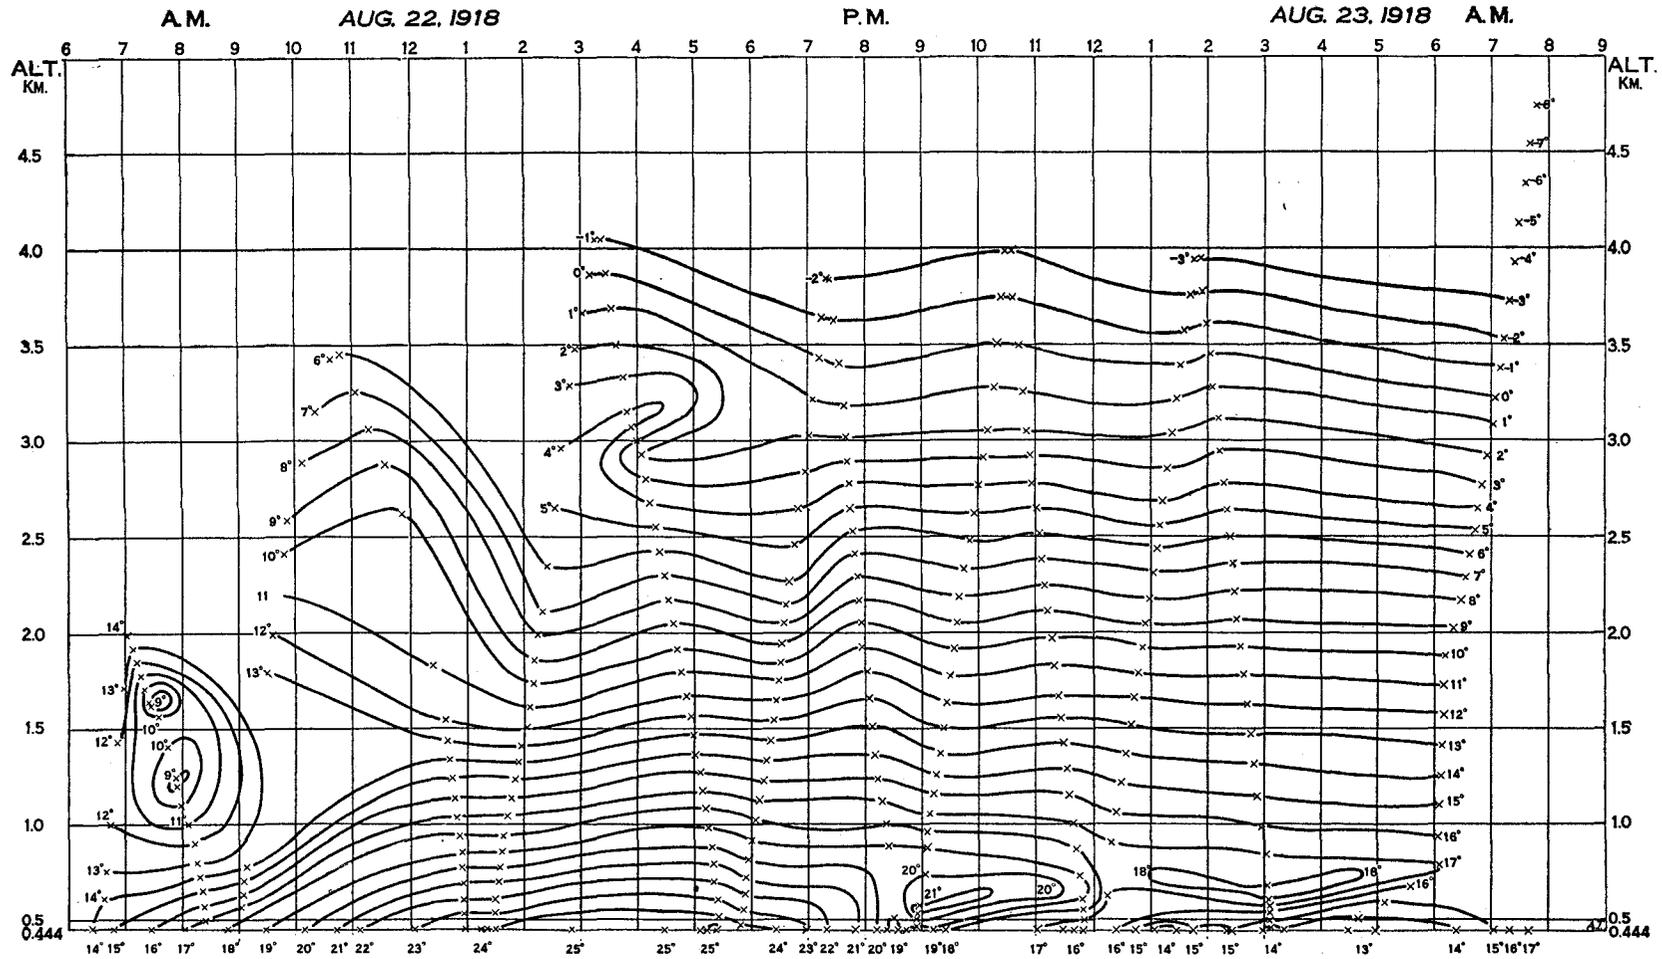

FIG. 9. Free-air temperatures, °C., above Ellendale Aerological Station; observed August 22-23, 1918.

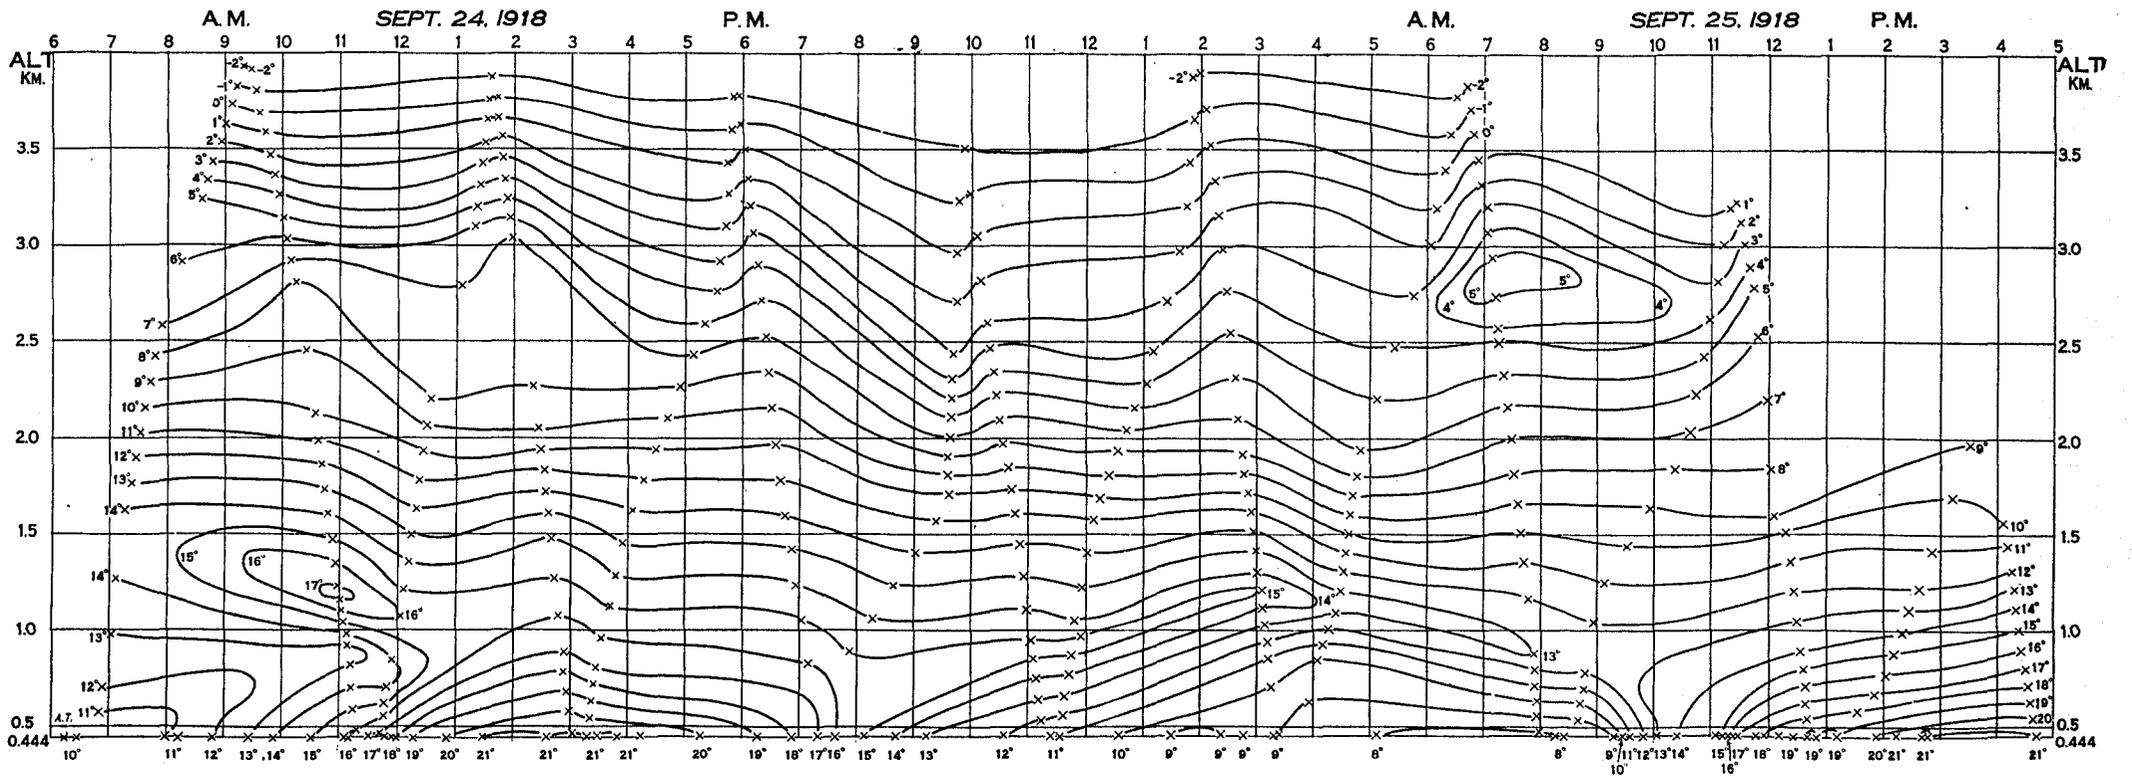

FIG. 10. Free-air temperatures, °C., above Ellendale Aerological Station; observed September 24-25, 1918.

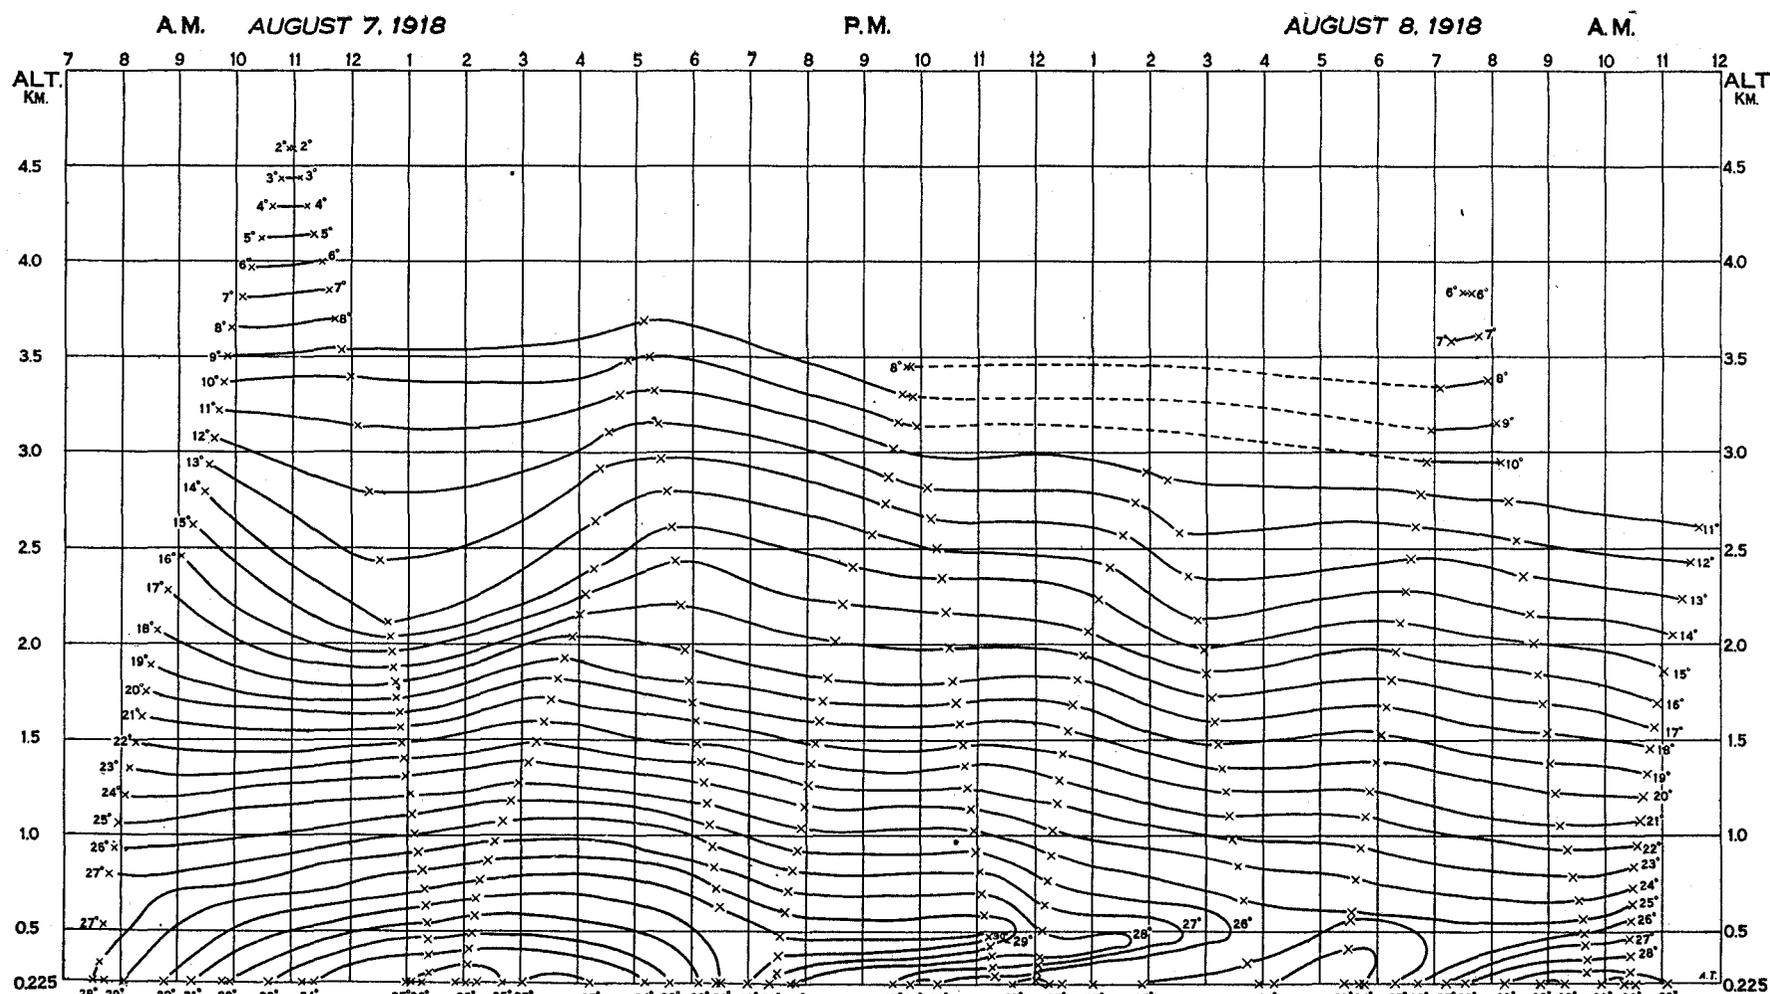

FIG. 11. Free-air temperatures, °C., above Royal Center Aerological Station; observed August 7-8, 1918.

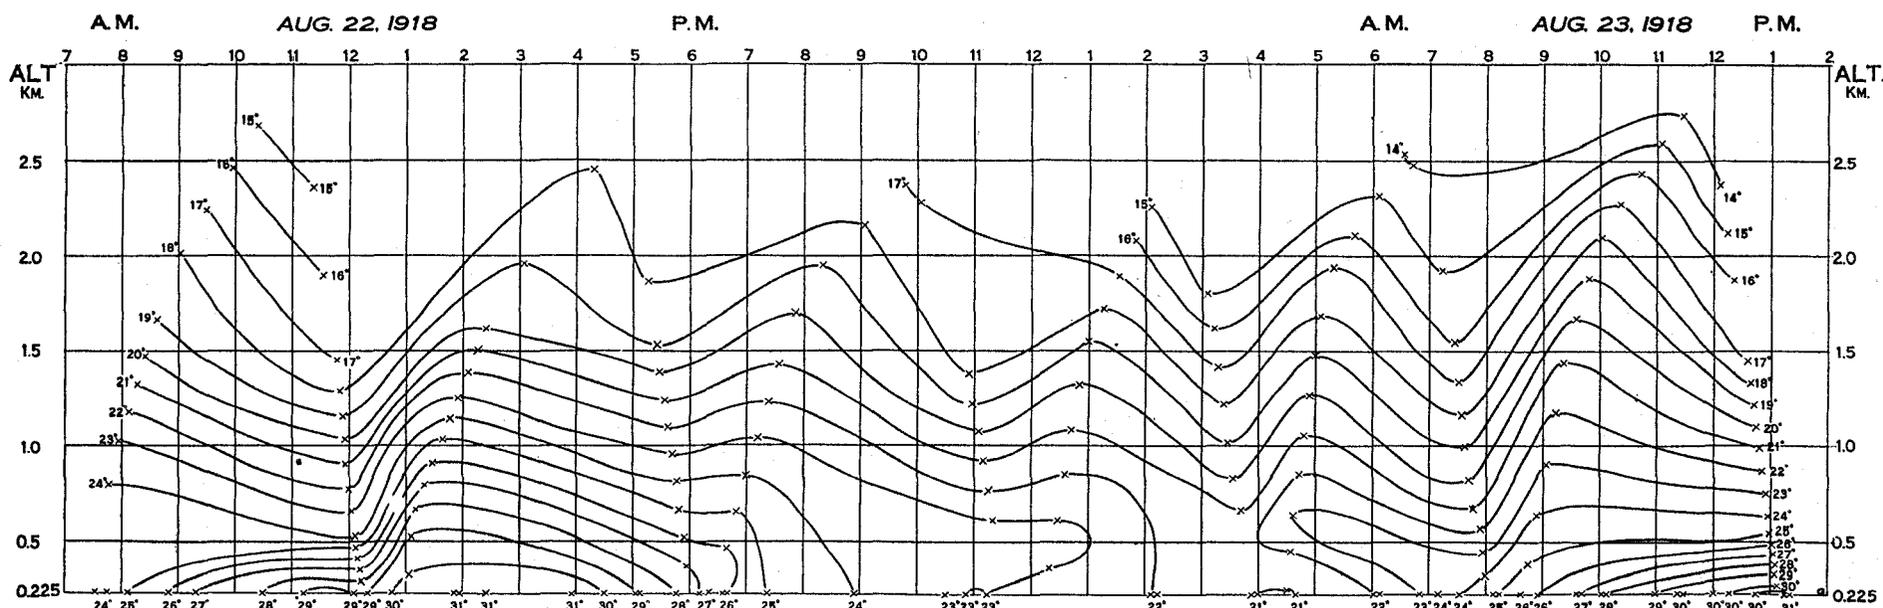

FIG. 12. Free-air temperatures, °C., above Royal Center Aerological Station; observed August 22-23, 1918.

southwestward to New Mexico, Drexel being very nearly in the center of it. High pressure (about 1,019 mb.) covered the southeastern States. Under the influence of this pressure distribution, winds, both at the surface and at higher levels, were south-southwesterly and southwesterly.

*August 21-22.*—Pressure conditions were somewhat similar during this series to those during the series of August 5-6, viz: high pressure over the eastern and southeastern States, diminishing from 1,026 to 1,019 mb., and a trough of low pressure (about 1,010 mb.) extending from the upper Lakes southwestward to New Mexico. In this case the low pressure passed to the east of the station during the latter part of the series. Hence, the winds, both surface and aloft, were southerly to southwesterly, changing with the eastward movement of the low pressure, to north-northwesterly and north-northeasterly.

*September 11-12.*—A fairly well-developed LOW moved from Minnesota eastward to Lake Huron, the pressure diminishing from 1,012 to 1,006 mb. A moderate HIGH (about 1,025 mb.) covered the central Rocky Mountain States. Under the influence of this pressure distribution surface winds were northerly to northwesterly; those at higher levels, northwesterly and strong. The northerly component in the upper winds, due to the northeastern LOW, was observed to the greatest height reached by the kites, viz: 4,000 meters.

*September 23-24.*—Throughout this series high pressure overlay the portion of the country east of the Mississippi Valley but diminished in intensity from 1,030 to 1,022 mb. A fairly well-developed LOW (about 1,005 mb.) moved from Wyoming southeastward to northern Texas. With the approach of this LOW surface winds backed from southerly to south-southeasterly; at higher levels, from southwesterly to south-southwesterly.

#### *Ellendale, N. Dak.*

*July 30-31.*—Relatively high pressure (about 1,023 mb.) was central over the upper Lakes and low pressure (about 1,008 mb.) north of Montana. There was practically no movement of these centers and the barometric gradient between them was small. Surface winds were southerly, veering with altitude to southwesterly. Upper winds were of low velocity.

*August 9-10.*—Low pressure (about 990 mb.), central north of Montana at the beginning of this series, passed eastward to western Ontario and considerably diminished in intensity (1,004 mb.). Near the end of the series another moderate LOW (1,006 mb.) appeared north of Montana, pressure between the two being relatively high (1,013 mb.). Surface winds veered from southerly to northwesterly, later backing to westerly. At higher levels they were south-southwesterly, veering to westerly. The southerly component in the upper winds persisted for some time after the change to northwesterly occurred at the surface.

*August 22-23.*—High pressure (1,026 mb.) was central over the northwestern States and a well-developed LOW (1,000 mb.) moved from north of the Dakotas to central Ontario. Early in the series surface winds were southwesterly veering with altitude to west-northwesterly. With the eastward movement of the LOW surface winds shifted to west-northwesterly; those at higher levels to westerly.

*September 24-25.*—During this series a well-developed LOW (1,005 mb.) moved from eastern Colorado to eastern Texas. Pressure was relatively high (1,026 mb.) over the upper Lakes and over Washington. These HIGHS moved eastward to New England and Montana respectively, the latter increasing in energy to 1,030 mb. Surface winds backed from easterly to north-northeasterly; those at higher levels from south-southeasterly to northeasterly. This series is of special interest in that it shows an easterly component in the winds up to the greatest height reached, viz: 4,000 meters. In general these winds diminished in strength with altitude and at still higher levels, as indicated by alto-cumulus and alto-stratus clouds, winds with a westerly component prevailed.

#### *Royal Center, Ind.*

*August 7-8.*—High pressure (about 1,019 mb.) covered the southeastern States and a trough of relatively low pressure (about 1,008 mb.) extended from Texas northeastward to the lower Lake region. Under the influence of this distribution surface winds were generally south-southwesterly; those at higher levels, southwesterly.

*August 22-23.*—Relatively high pressure (about 1,020 mb.) covered the middle Atlantic Coast States. A well-developed LOW (1,000 mb.) moved from north of the Dakotas to central Ontario. Winds at the surface and at higher levels were southerly to west-southwesterly and of low velocity.

*September 12-13.*—Low pressure (1,008 mb.) moved from Lake Huron to eastern Ontario, and high pressure from Colorado to Kentucky, the latter diminishing in intensity from 1,024 to 1,017 mb. Under the influence of this HIGH surface winds backed from west-northwesterly to southwesterly; winds at higher levels were westerly to northwesterly and of low velocity.

#### *Gravity potential.*

Table 4 contains values of gravity potential for standard gravity, 980.665 dynes, and for each of the four aerological stations. The method used in determining these values is discussed in SUPPLEMENT NO. 12 (*Aerology No. 7*) pages 8, 9. The "sea-level" values of gravity at the two new stations have been computed by introducing into formula (2) on page 9 the proper values of  $g_s$  and  $z_g$ , viz:

	$g_s$	$z_g$
Broken Arrow.....	979.742 dynes	233 meters.
Royal Center.....	980.187 dynes	225 meters.

This result gives for  $g$  at Broken Arrow 979.742 and at Royal Center, 980.257.

TABLE 4.—Values of gravity potential, *gv.* for standard gravity and for Broken Arrow, Okla., Drexel, Nebr., Ellendale, N. Dak., and Royal Center, Ind.

Altitude, sea level (meters).	Standard gravity, <i>g</i> =980.665.

**BROKEN ARROW AEROLOGICAL STATION.**

By JOHN A. REIHLE, Observer.

The Broken Arrow Aerological Station is located in northeastern Oklahoma, 38° 02' north latitude and 95° 49' west longitude, and is 233 meters above sea level. The station is 1½ kilometers east of Broken Arrow, a city of nearly 2,000 population, on the Missouri, Kansas & Texas Railway, between Tulsa and Muskogee. The kite-reel house is situated on a slight elevation commanding a good view in all directions except for some low hills a kilometer away to the northwest. The surrounding country is a gently-rolling or nearly level treeless prairie, a matter that should facilitate the recovery of kites that break away.

The lease for the property went into effect March 1, 1918. All buildings for use of the station were built specially for the purpose. The office building consists of three rooms, namely, office, shop, and storage room, with a second floor for kite storage. The shop is equipped for the building and repair of kites and the testing of meteorographs. Other buildings consist of reel house, garage, and coal house. The reel house is equipped with the standard automatic kite reel, the drum of

which holds about 14 kilometers of steel piano wire. Power for reeling is furnished by a 5-horsepower motor, operating on single phase, 220-volt current furnished by the power plant at Broken Arrow. An aircraft theodolite is used to determine the angle of elevation of the kites.

The wind tower, instrument shelter, rain and snow gages, and all instrumental equipment for surface meteorological observations were installed; and observations were begun on May 12, 1918. The first free-air data were obtained August 16, 1918, by means of hand flights. Flights to low altitudes were continued as often as practicable until the arrival of the motor, when daily flights were begun.

The aerological work at this station includes, besides kite flying, pilot-balloon work by the Signal Corps, in cooperation with the Weather Bureau. Two Signal Corps men were detailed for this work; and balloon observations were begun October 19, 1918. The station is equipped for both single and two-theodolite work. Ascensions are made daily at 7 a. m. and 2 p. m.

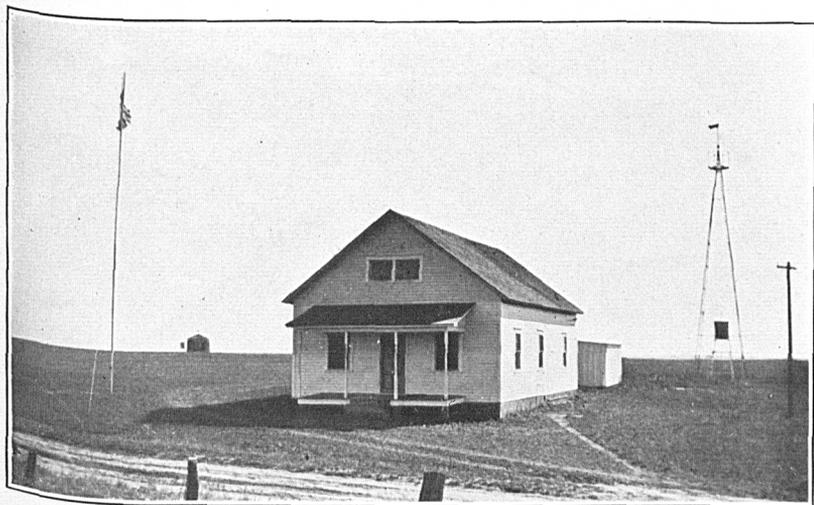

FIG. 14. Front view of office building (Broken Arrow).

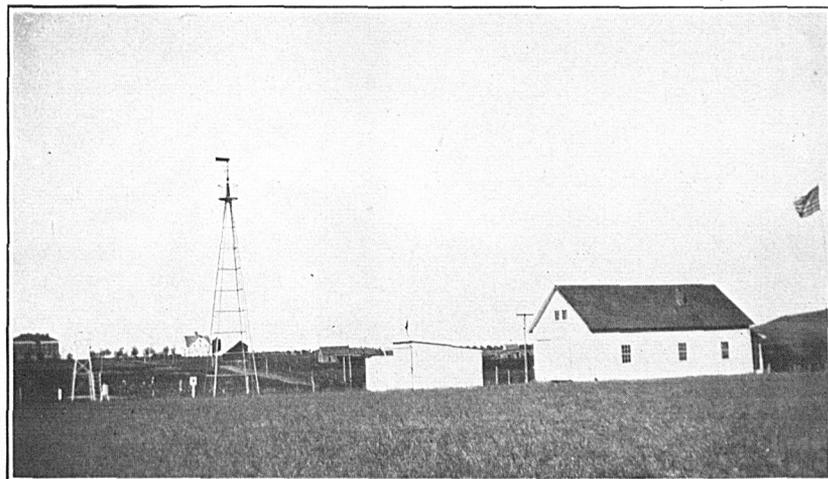

FIG. 15. General view of buildings and instrumental equipment (Broken Arrow).

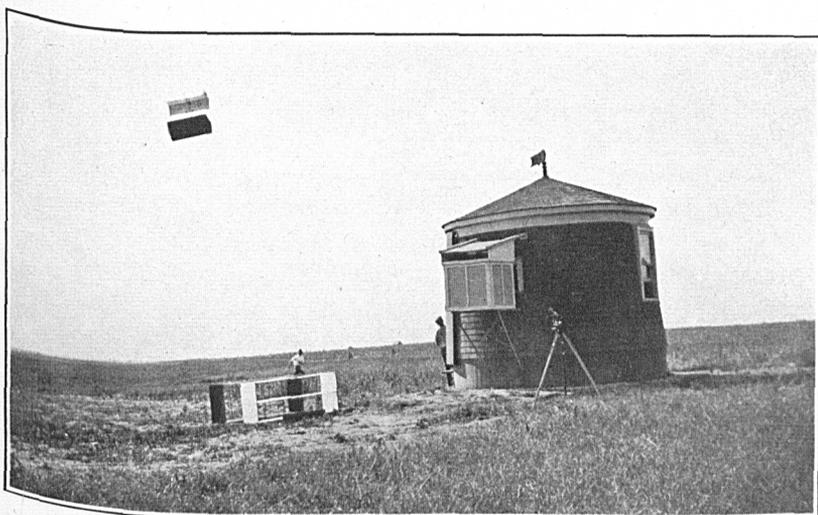

FIG. 16. The beginning of a kite flight (Broken Arrow).

FIG. 17. The beginning of a pilot-balloon ascension (Broken Arrow).

A plot showing the kite field and the relative location of the buildings and instruments is shown in figure 13. Figure 14 is a front view of the office building; figure 15, a general view of the buildings and instrumental equipment; figure 16 shows the beginning of a kite flight; and figure 17, the beginning of a pilot-balloon ascension.

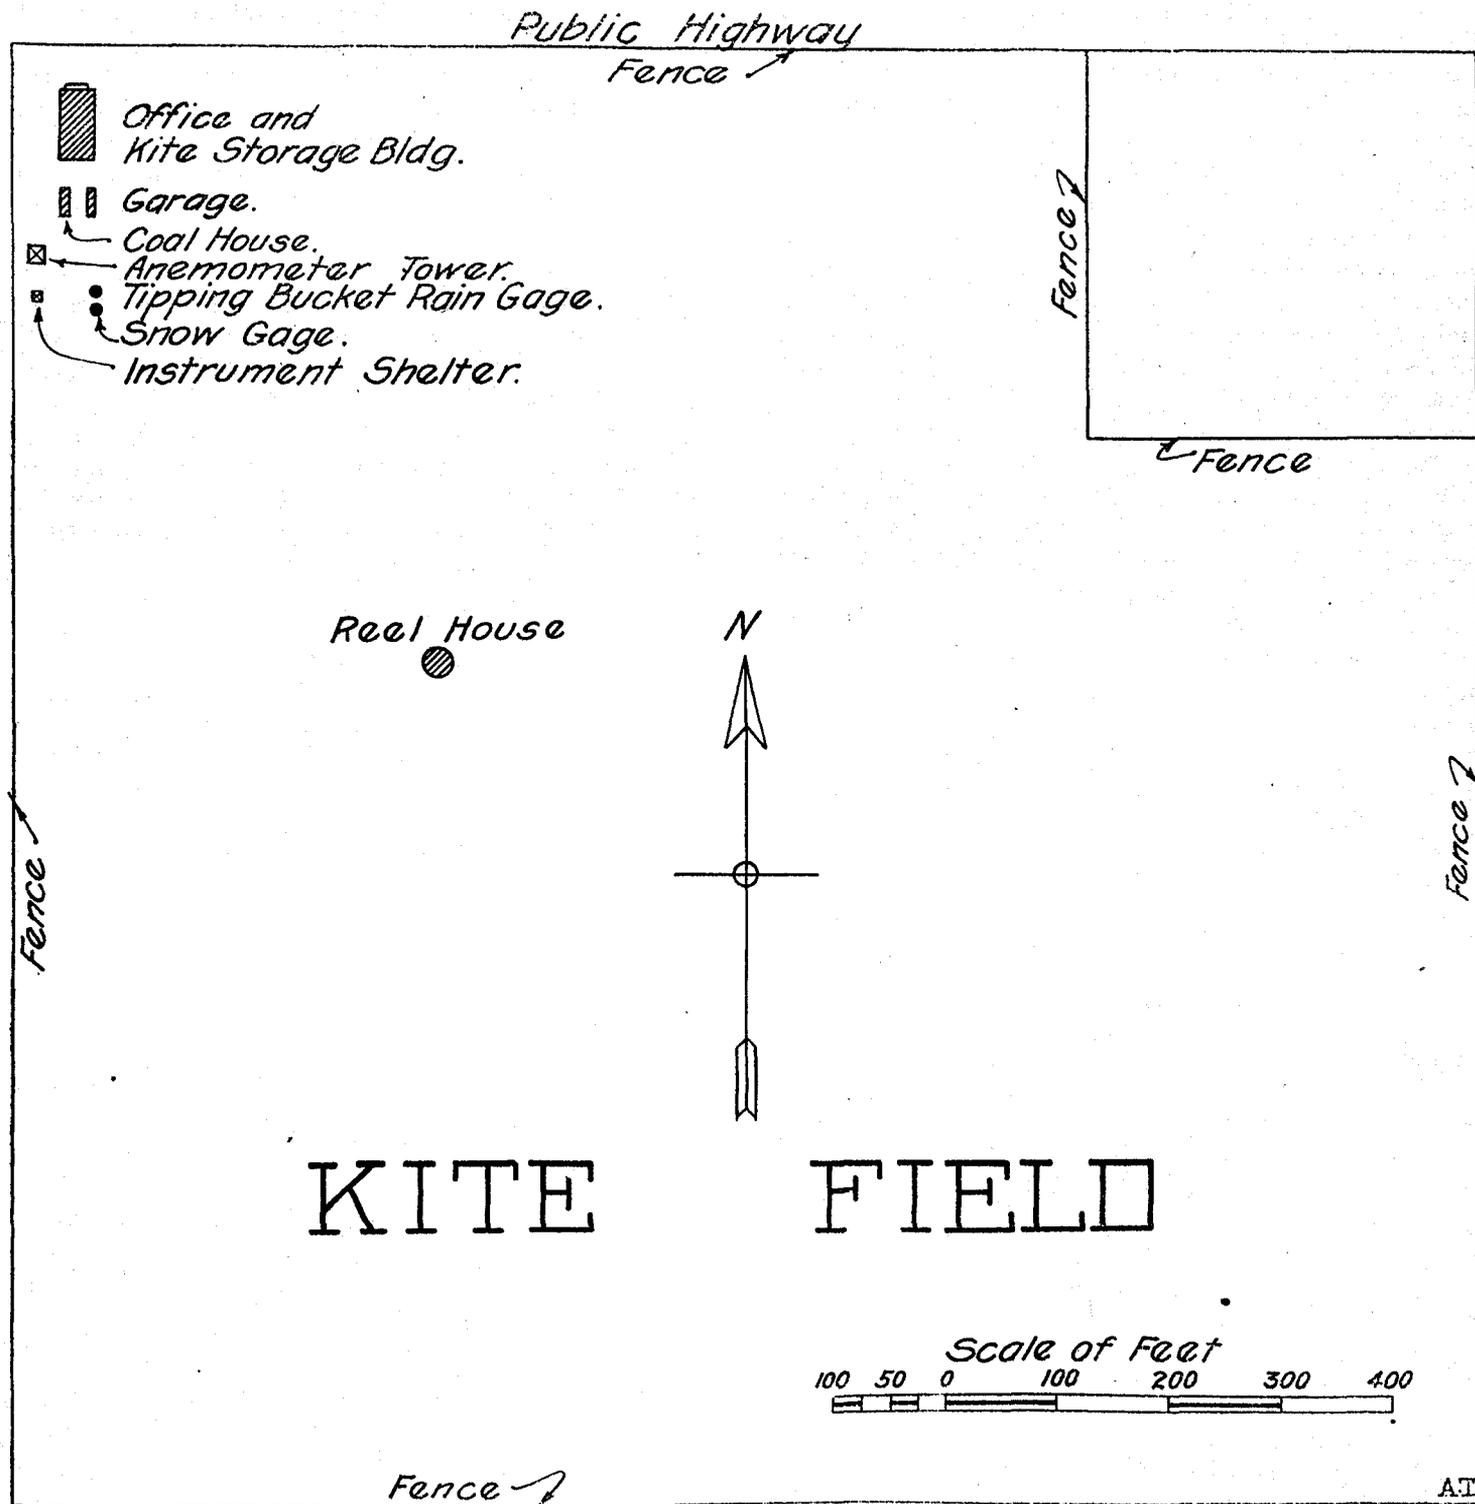

FIG. 13. Plot showing the position of buildings and kite field at Broken Arrow Aerological Station.

Figure 14 is a front view of the office building; figure 15, a general view of the buildings and instrumental equip-

The reel house is of the same type as that at Royal Center. (Fig. 21.)

## ROYAL CENTER AEROLOGICAL STATION.

By HOMER W. BALL, Meteorologist.

The aerological station in Indiana, conducted by the United States Weather Bureau, is located at Royal Center, a town of 800 people, 16 kilometers northwest of Logansport, the nearest large town, and about 170 kilometers southeast of Chicago, Ill. The latitude of the station is  $40^{\circ} 53'$  north, longitude  $86^{\circ} 29'$  west, and elevation above sea level, 225 meters.

The country surrounding the place is of a rolling nature and is arranged in farms of very fertile land. There is considerable timber land, consisting of wood lots of several acres on each of the farms. This feature, of course, makes it rather difficult to recover kites whenever they break away. The roads are, as a rule, macadamized or graveled, and consequently traveling is easy.

The lease for the property in use by the Government became effective March 1, 1918, and immediate preparation was made to occupy the buildings. The office building is separated from the others and is located across the street from the shop and kite storage room. Two rooms are required for the office force, one for the meteorological instruments and "forms" desk and the other for the use of the official in charge and the pilot-balloon observers. The other buildings in use are the shop, kite-storage room, and engine room, under one roof; garage; coal shed; and a reel house on a knoll in the

center of the kite field. The general arrangement of these buildings is shown in figures 18, 19, and 20.

Observations of precipitation were begun April 1, 1918; and observations of temperature, pressure, wind, clouds, and automatic records of rainfall and sunshine on April 9. Complete automatic records were not made until May 17, due to the delay in receiving the anemometer tower.

The first kite flight was made July 12, and flights have been continued every day since then when practicable. The first diurnal series was made August 7 and 8 and consisted of six flights, averaging about 3,600 meters above sea level.

Electricity for power and lights is furnished by a direct-current, 220-volt generating plant of 4-kilowatt capacity, installed in one of the buildings. Kites are reeled in by means of a reel of standard type connected to a 5-horsepower, variable-speed motor.

Cooperative work with the Meteorological Section of the Signal Corps of the Army began October 2, 1918. The first pilot-balloon ascension was made at that time, and this work is being continued at the present time. Figure 21 shows the kite reel house, with instrument shelter, power reel, and theodolite; and figure 22, the beginning of a pilot-balloon ascension.
